Sir, I have tried the lock box column again and also facing the same situation. Even another member of our team tried to provide the lock box code from the project dashboard but was unable to do that. I am attaching the screen shot in this document.

The screenshot shows the PropSoft.ai Project Dashboard. A table lists projects with columns for Market, ECD, Order Type, Received Date, % Complete, Created Date, Start Date, Lockbox, City, Country, Zip Code, and County. The 'Lockbox' column for the Escondido project is highlighted with a green circle.

Market	ECD	Order Type	Received Date	% Complete	Created Date	Start Date	Lockbox	City	Country	Zip Code	County
Escondido	01/20/2026	Occupied Maintenance	01/19/2026	-	01/19/2026	01/19/2026	No	Escondido	United States	92027	San Diego
Mascotte	01/19/2026	Occupied Maintenance	01/19/2026	-	01/19/2026	01/19/2026	No	Mascotte	United States	34753	Lake
Oakland	01/15/2026	Occupied Maintenance	01/15/2026	-	01/15/2026	01/15/2026	No	Oakland	United States	94618	Alameda

The mark area is a work order naming 73928 and the address of the property is 2700 East Valley Parkway #Space 52 - Escondido, CA 92027. In this property we can see that from the project dashboard it is telling me that there is no lock box but if we get into the work order and go to the project dashboard, it is telling me that the lock box code for this is 1962. Please check below:

The screenshot shows the PropSoft.ai Project Details page for work order 73928. The 'Lock Box' field is highlighted with a green circle, showing the code 1962. A notification at the top right says 'Copied: 2700 East Valley Parkway #Space 52 - Escondido, CA 92027'.

Save Note

Sir for the maps section, the problem that I am facing is if I want to see the location of three work orders then it is showing me five different location and was unable to identify the right location of the work orders. We generally need that service for routing the work order. Please check below:

In this work order I have selected three projects. So I am expecting that I will find three prints in the map while I will open it.

But in the photo I have found more than three points. Please suggest if we have to follow any particular option for this. Thanks
